Using the plate and channel system almost any size of sign blank can be produced including large or outsize assemblies.

Large blanks are manufactured by splitting the sign into modules and using an interlocking clip extrusion to 'stack' the sign panels. (As illustrated.)

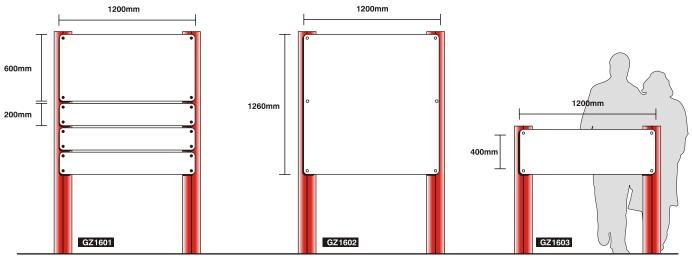

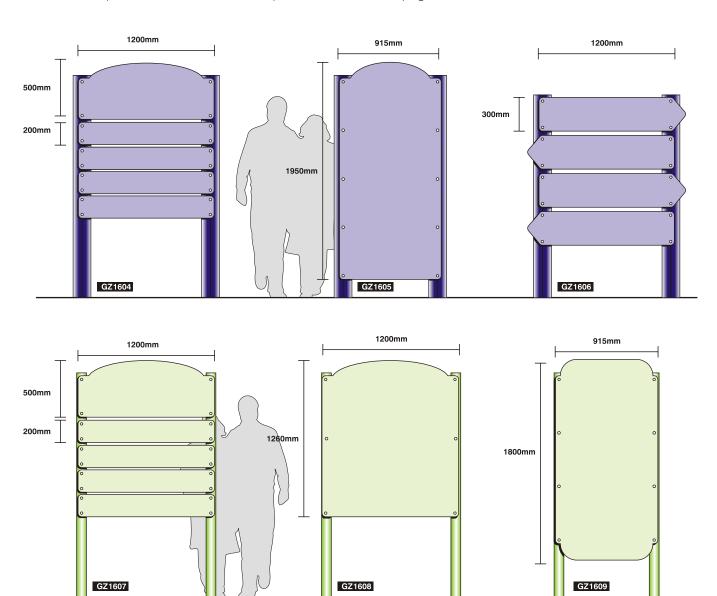

CORNICHE

A number of panels can be used on the same posts to create a 'directory sign'.

CORNICHE

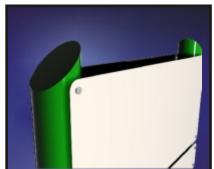

Corniche represents a refreshing new choice in the budget sign market. It can be used for interior and exterior applications and is suitable for signs up to 2m high and 1.2m wide.

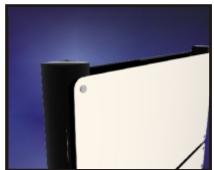

Corniche can be used in conjunction with a wide variety of post options and if you wish aluminium panels can be mixed with smoked acrylic ones to create a very sophisticated look.

Corniche fixings have a built in anti-theft feature, however, we would not recommend this system where a high probability of theft exists.

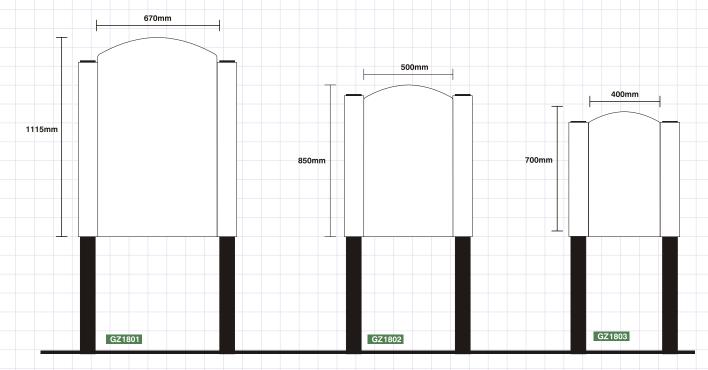

As 760 has almost invisible face fixings and looks equally good from the front and rear. Graphics can therefore be applied to both sides.

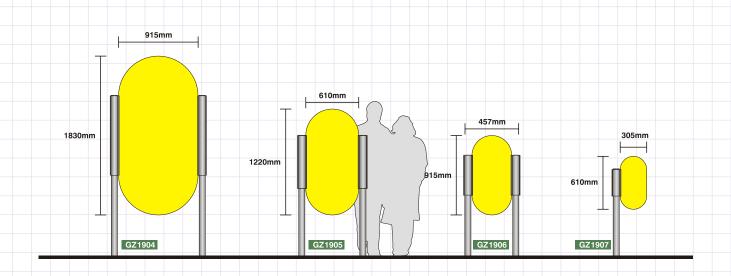

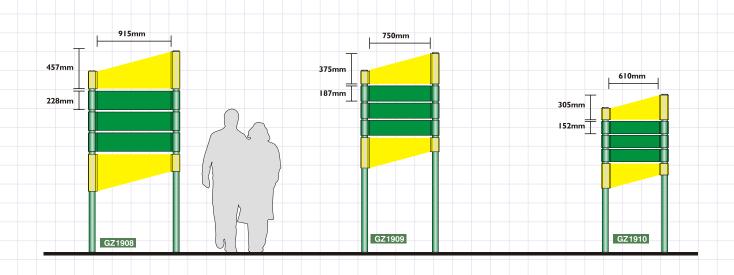

Height of individual sign panel	Max recommended width
Less than 150mm	Not recommended
150mm to 200mm	600mm
201mm to 300mm	890mm
300mm to 3050mm	1196mm

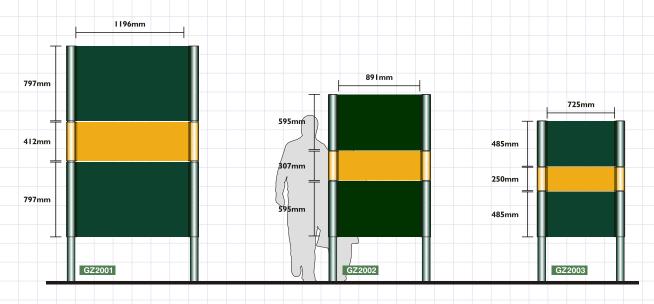

This page illustrates just some of the many sign panel combinations available.

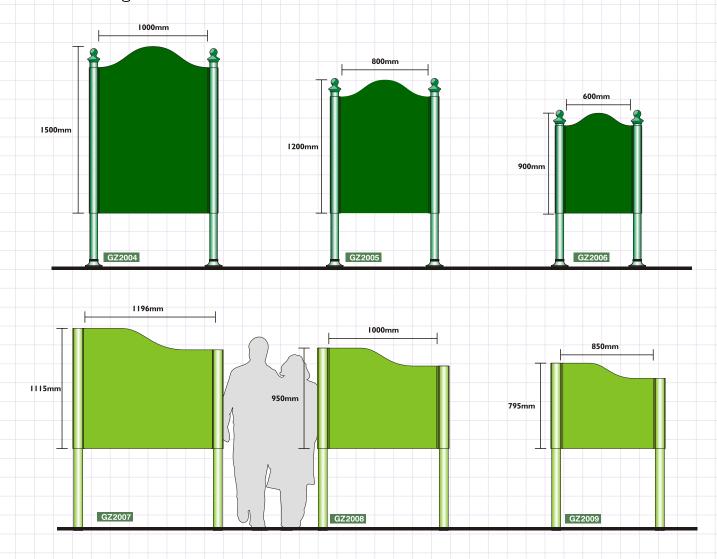

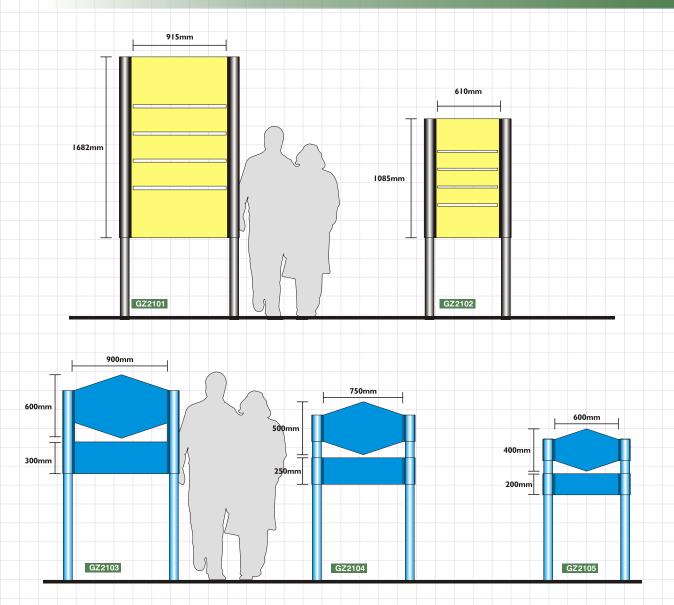

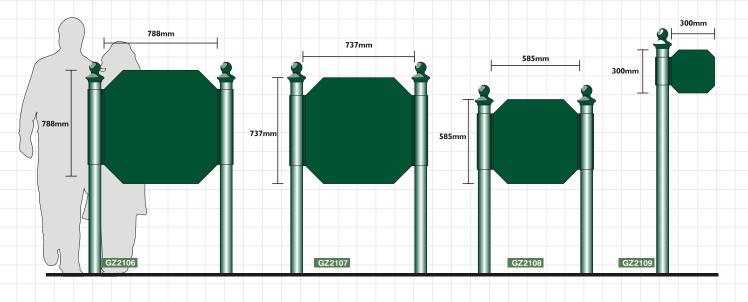

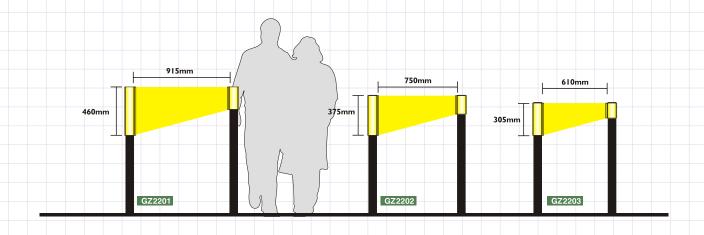

A large range of finials and base embellishers are available to compliment these signs.

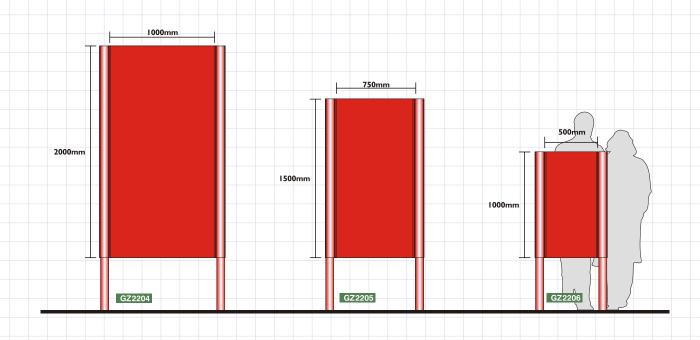

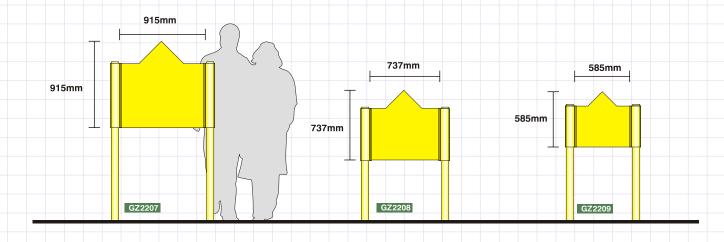

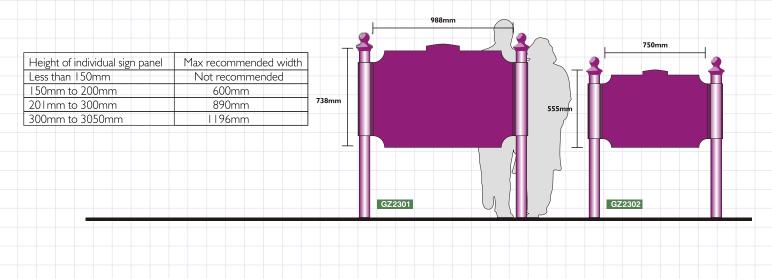

This page illustrates just some of the many sign panel combinations available.

PLANTING DEPTH

The system comprises arms manufactured from 3mm thick aluminium which are factory fitted into purpose made finger post sockets. The sockets are then slotted over 76mm aluminium posts and secured by grub screws.

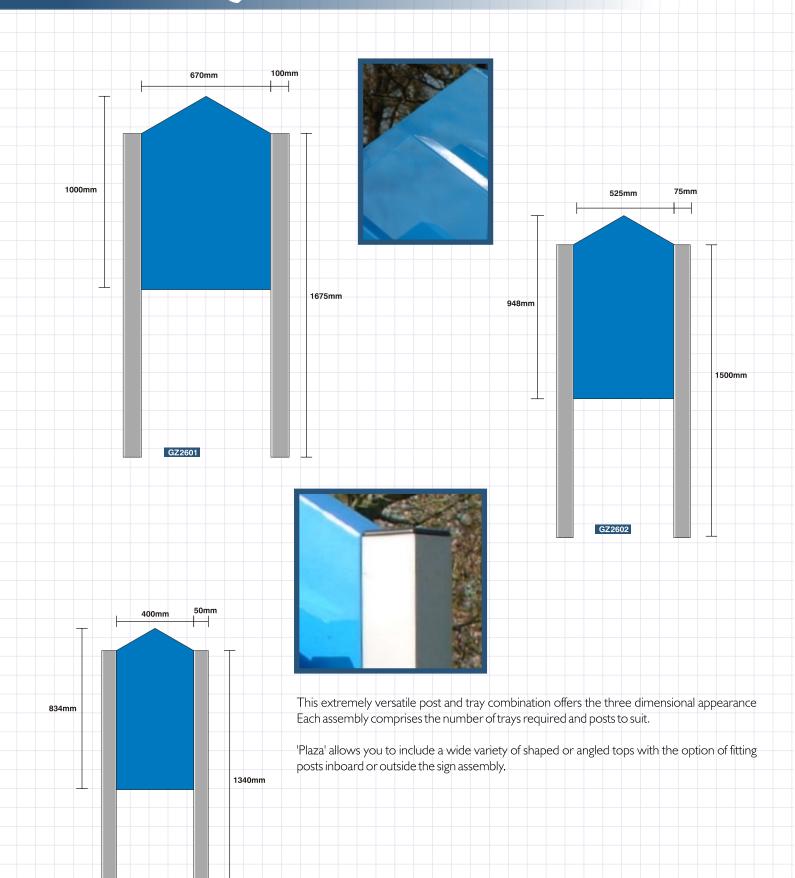

GZ2401

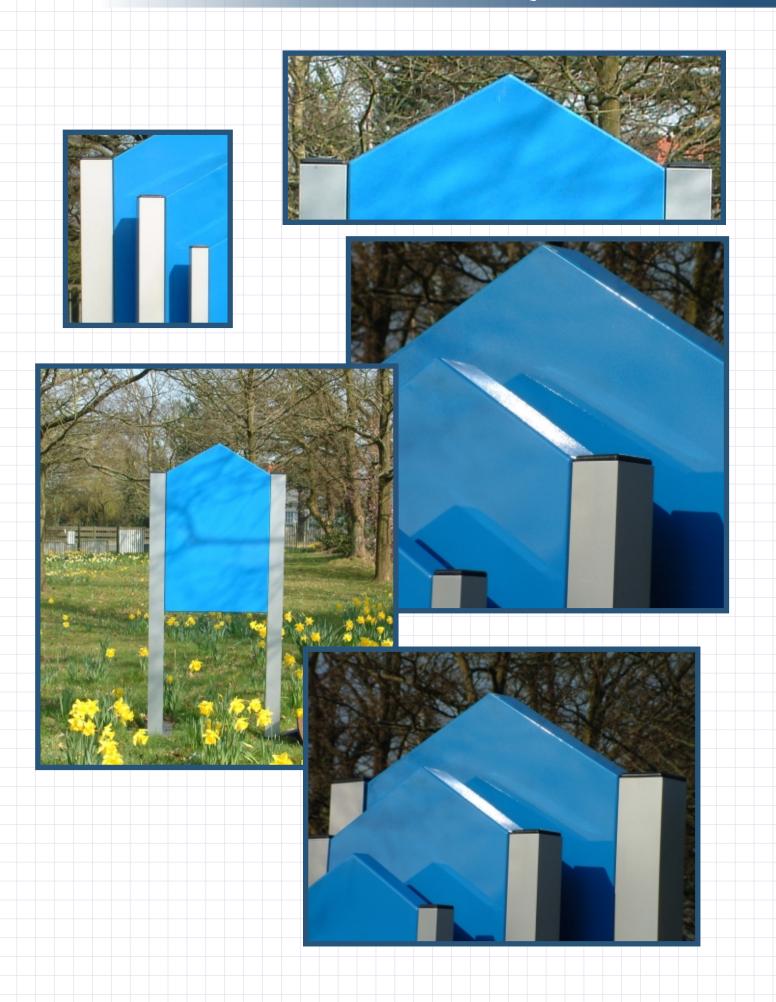

An alen key is all you will require to assemble this product. Standard arm size $750 \text{mm} \times 165 \text{mm}$ (including chevron end). Each blade occupies one level of the signpost and in this way multi-level assemblies can be arranged on one post. All sockets are able to rotate through a full 360° and can therefore be set to point in any direction before tightening.

'Plaza' allows you to include a wide variety of shaped or angled tops with the option of fitting posts inboard or outside the sign assembly.

This extremely versatile post and tray combination offers the three dimensional appearance normally associated with considerably more expensive sign systems but at a greatly reduced cost.

'Plaza' systems are available mill finish or powder coated to most standard RAL or BS colours.

CURVED PROJECTING SIGNS

Available in three sizes these extremely durable signs could not be easier to install. They are primarily designed for external use but could also be used internally.

The signs are open top and bottom to allow rain to pass directly through

They are perfect for 'hard life' applications where an element of style is still required.

Typical applications are outside banks, building societies, newsagent chains and petrol forecourts.

PROJECTING SIGNS

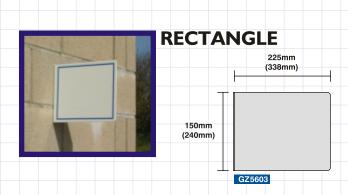

These extremely low cost signs are manufactured from 3mm powder coated aluminium.

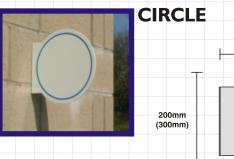

They are suitable for interior and exterior use.

All three shapes are available in two sizes as illustrated (Blue borders are not included).
